Dear Hiring Manager

Thank you for the opportunity to apply for the Software Engineer role at DRW. I am confident I am a good fit for the skills required, and I always excited to learn a new language and skills to make me even more suitable for the role.

I am a curious and adaptable Computer Science student currently attending University of Warwick. I have studied a range of subject areas from algorithmic theory to computational learning theory and machine learning. In my previous year of study, I have had the opportunity to demonstrate my problem solving and self-sufficiency in a yearlong solo project designing and creating a solution from the basic concept stages to a well performing approach to the problem. This year I will be working in a 6-person team to complete a similar research and development project where I hope to further build my team working and collaboration abilities.

In between term time I have gained a range of professional experiences in different fields. Most recently I spent a summer at JP Morgan as an intern on an infrastructure team working alongside an Applied AI team. This gave me new experience in the deployment and design of large-scale responsive systems, as well as an interesting insight into how ideas I have studied are applied to real world problems.

From this I believe I have gained a good mix of team and solo working skills in both a professional and more research-based environment, I hope you agree that I could fit well with your team and continue to learn from you!

Thank you for your consideration, and I look forward to hearing from you soon.

James Page
